## 2. Running Time Comparison

Table 3. Running time on Multiple Dataset and Split CIFAR-100.

Methods	Multiple Dataset (hours)	Split CIFAR-100 (hours)
EWC	0.16	1.31
MAS	0.17	1.31
AGEM	0.16	1.30
OGD	0.47	3.01
DER	0.18	1.27
GDumb	0.13	0.92
MEGA	0.15	1.05
STREAM	<b>0.11</b>	<b>0.79</b>

## 3. Failure Example

Figure 1. The Failure example for GEM, A-GEM and OGD, where the current gradient  $\nabla f_2(\theta)$  is in the opposite direction to the memory gradient  $\nabla f_1(\theta)$ . The update direction is based on a rotation of the current gradient, which is orthogonal to the memory gradient:  $\text{Proj}_{\nabla f_1(\theta)}^\perp(\nabla f_2(\theta))$ . Therefore it cannot learn task 2.

## 4. Results with Multiple Runs

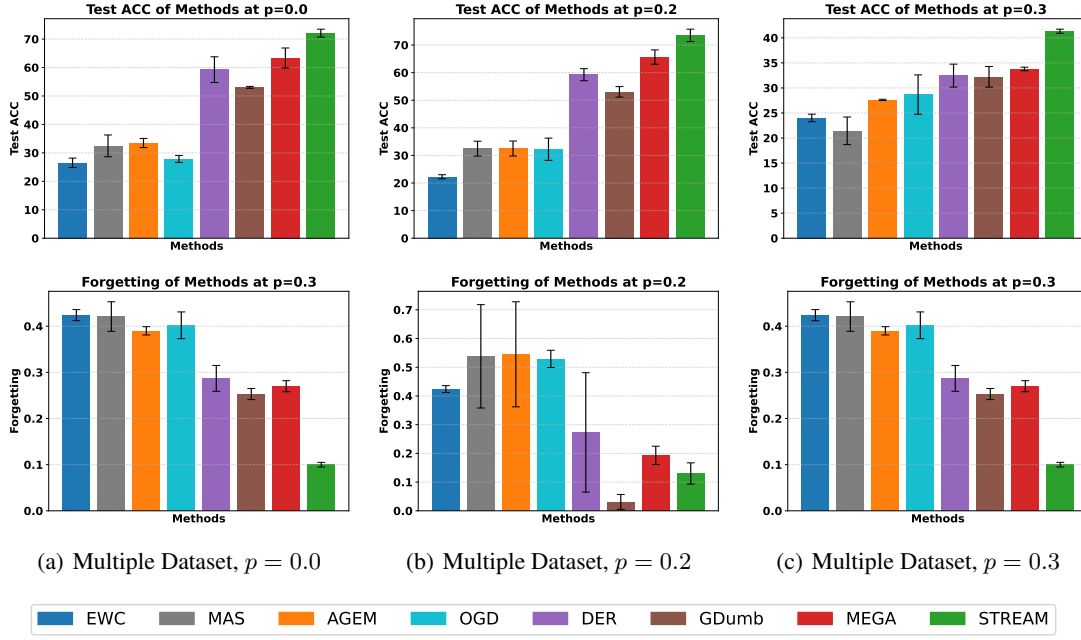

Figure 2. Performance (test accuracy and forgetting) of continual learning methods on Multiple Dataset over 5 runs.

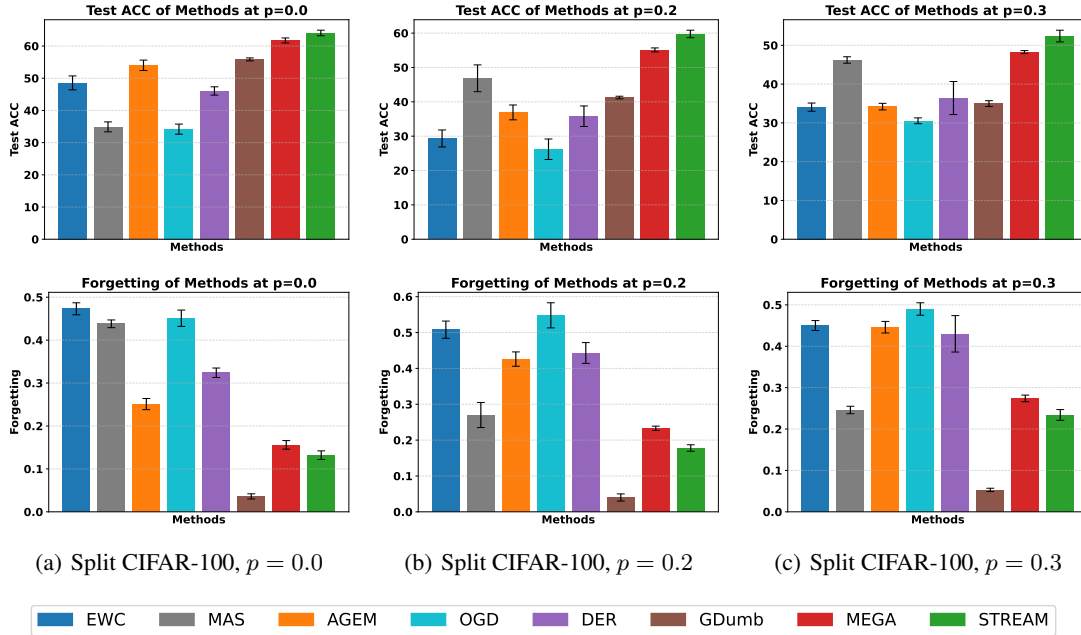

Figure 3. Performance (test accuracy and forgetting) of continual learning methods on Split CIFAR100 over 5 runs.

Figure 4. Performance (test accuracy and forgetting) of continual learning methods on Split Tiny-Imagenet over 5 runs.

Figure 5. Performance (test accuracy and forgetting) of continual learning methods on AVE-CI over 5 runs

## 5. Synthetic Experiment for the counterexample

(a) The value of the  $\theta^{(1)}$  vs. iterations. (b) The forgetting vs. iterations. (c) Loss on task 2 vs. iterations.

Figure 6. Synthetic experiment for the counterexample. (a), (b), (c) show the evolution of the value of  $\theta^{(1)}$ , the forgetting on task 1 and the loss on task 2. STREAM can find the optimal  $\theta^{(1)}$  and achieve minimal forgetting and loss on the new task. But A-GEM and OGD fail to update their parameter  $\theta^{(1)}$  throughout the training process, thus cannot minimize the loss on the new task. ER minimizes the loss functions  $f_1$  and  $f_2$  jointly (Assume that memory is large enough, it can visit  $f_1$  as it needs). ER cannot find the optimal value of  $\theta^{(1)}$ , thus can not achieve the low loss on task2. ER performs well in terms of forgetting, but STREAM still exhibits good forgetting metric (forgetting = 0).

## 6. The Frequency Statistics of Model Update on Current/Memory Data

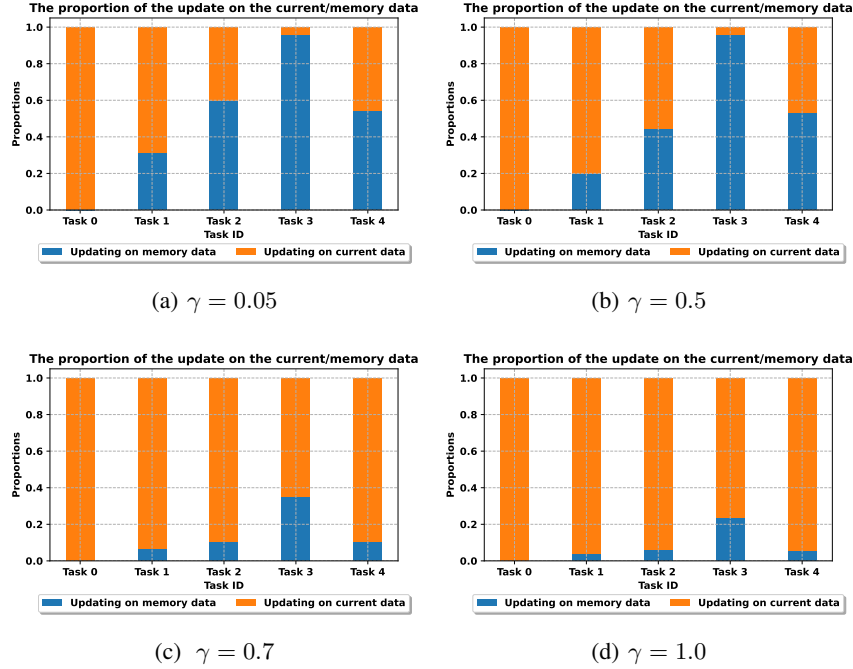

Figure 7. The frequency statistics of model update on the current/memory data.

## 7. Hyperparameter Tuning

Table 4. Results vs. memory size ( $m$  is the memory size) on Multiple Dataset.
